Coarse_times wrt Evt_ID for channel 95 (ping)

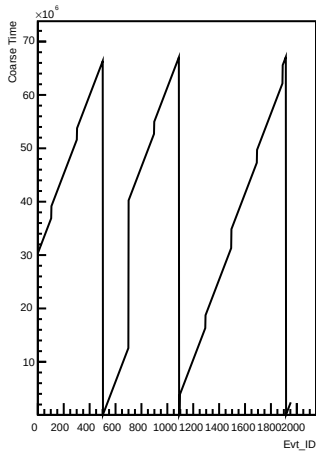

The graph plots Coarse Time (in units of $\times 10^6$) against Evt. ID. The data is presented in three separate, jagged segments, indicating a non-continuous recording or a specific selection of events. Each segment shows a general upward trend in coarse time as the event ID increases, with some local fluctuations. The first segment covers Evt. ID from 0 to about 550, the second from 550 to 1100, and the third from 1100 to 2000.
