Evt_ID	Coarse Time (x10 ⁶)
0 - 150	15
150 - 200	30
200 - 400	45
400 - 600	60
600 - 800	40
800 - 1000	55
1000 - 1200	18
1200 - 1400	35
1400 - 1600	50
1600 - 1800	65
1800 - 2000	65

The graph displays 'Coarse Time' on the y-axis (scaled by $\times 10^6$) against 'Evt_ID' on the x-axis. The data is represented by a black step-like line. The values start at approximately 15 for Evt_ID 0, rise to 30 at Evt_ID 200, then to 45 at Evt_ID 400. It reaches a peak of 60 at Evt_ID 600, drops to 40 at Evt_ID 800, rises to 55 at Evt_ID 1000, and then drops to near zero at Evt_ID 1200. It remains near zero until Evt_ID 1400, then rises to 20 at Evt_ID 1600, 35 at Evt_ID 1800, and finally to 65 at Evt_ID 2000.

Figure 1 is a step plot showing Coarse Time (Y-axis, 0 to 70 $\times 10^6$) versus Event ID (X-axis, 0 to 2000). The plot shows a series of steps representing time intervals between events. The time generally increases with event ID, with some fluctuations. The final event (ID 2000) occurs at approximately 65 $\times 10^6$.

Figure 1 is a line plot showing the Coarse Time (Y-axis, ranging from 0 to 70 $\times 10^6$) versus Evt_ID (X-axis, ranging from 0 to 2000). The plot displays a step-like function representing the coarse time for each event. The time generally increases with Evt_ID, with significant jumps at Evt_ID 600, 1000, 1400, and 1800. The time values range from approximately 15 $\times 10^6$ to 65 $\times 10^6$.

Figure 1 is a step plot showing the course time (in seconds, scaled by 10^6) for each event ID. The x-axis is labeled 'Evt_ID' and ranges from 0 to 2000. The y-axis is labeled 'Course Time' and ranges from 0 to 70, with a multiplier of 10^6 at the top. The plot shows a series of steps, indicating the time taken for each event. The time generally increases with event ID, with some fluctuations.

Figure 1 is a line graph showing the relationship between Coarse Time (Y-axis) and Ev. ID (X-axis). The Y-axis is labeled 'Coarse Time' and has a multiplier of $\times 10^6$. The X-axis is labeled 'Ev. ID' and ranges from 0 to 2000. The graph shows a step-like function, indicating that the Coarse Time is constant for a range of Ev. IDs and then jumps to a higher value. The Coarse Time starts at approximately 15 for Ev. ID 0, increases to 30 at Ev. ID 200, then to 45 at Ev. ID 400. It reaches a peak of 60 at Ev. ID 600, drops to 40 at Ev. ID 800, and then rises to 55 at Ev. ID 1000. There is a significant drop to near zero at Ev. ID 1200, followed by a sharp increase to 20 at Ev. ID 1400, and then to 35 at Ev. ID 1600. Finally, it reaches 50 at Ev. ID 1800 and jumps to 65 at Ev. ID 2000.

The figure is a step plot with 'Evt_ID' on the x-axis (ranging from 0 to 2000) and 'Coarse Time' on the y-axis (ranging from 0 to 70, with a multiplier of $\times 10^6$). The plot shows a series of steps representing the coarse time for each event. The time values are approximately: 15 for Evt_ID 0-100, 30 for 100-200, 45 for 200-400, 60 for 400-600, 40 for 600-800, 55 for 800-1000, 15 for 1000-1200, 19 for 1200-1400, 34 for 1400-1600, 50 for 1600-1800, and 65 for 1800-2000.
