The plot shows the number of clusters (N) on the y-axis (0 to 6) against the event ID (Evt_ID) on the x-axis (200 to 2000). The data is represented by a black line that starts at N=1 for Evt_ID 200, rises to N=2 at Evt_ID 300, drops to N=1 at Evt_ID 500, rises to N=2 at Evt_ID 600, drops to N=1 at Evt_ID 700, rises to N=2 at Evt_ID 800, drops to N=1 at Evt_ID 900, rises to N=2 at Evt_ID 1000, drops to N=1 at Evt_ID 1100, rises to N=2 at Evt_ID 1200, drops to N=1 at Evt_ID 1300, rises to N=2 at Evt_ID 1400, drops to N=1 at Evt_ID 1500, rises to N=2 at Evt_ID 1600, drops to N=1 at Evt_ID 1700, rises to N=2 at Evt_ID 1800, drops to N=1 at Evt_ID 1900, and rises to N=2 at Evt_ID 2000.

Figure 1 is a line graph showing the relationship between Coarse Time (Y-axis, scaled by $\times 10^6$) and Evt_ID (X-axis). The Y-axis ranges from 0 to 70, and the X-axis ranges from 0 to 2000. The graph displays a series of steps and jumps, representing the coarse time values for different event IDs. The data points are connected by vertical and horizontal lines, showing a generally increasing trend with some fluctuations.

The plot displays the number of clusters (N) on the y-axis against the event ID (Evt_ID) on the x-axis. The data shows a series of steps and peaks, indicating changes in the number of clusters over time. A notable peak occurs around Evt_ID 1100, where N reaches 5. The number of clusters generally increases over time, with some fluctuations.

The plot shows the evolution of g_{eff} as a function of the event ID. The x-axis is labeled 'Evt_ID' and ranges from 200 to 2000. The y-axis ranges from 0 to 6. The plot shows a series of steps and linear increases, with a significant jump at Evt_ID 1000.

The graph plots Course Time (Y-axis, scaled by 10^6) against Evt_ID (X-axis). The Y-axis ranges from 0 to 70, and the X-axis ranges from 0 to 2000. The data is represented by a series of connected line segments. The time starts at approximately 25 for Evt_ID 0, rises to 40 at Evt_ID 200, and then to 55 at Evt_ID 400. It drops sharply to about 4 at Evt_ID 600, then rises to 40 at Evt_ID 800. A major peak occurs at Evt_ID 1000, reaching approximately 65. This is followed by a sharp drop to about 2 at Evt_ID 1200, and then a gradual increase to about 65 at Evt_ID 2000.

Coarse_times wrt Evt_ID for channel 71 (pong)

Figure 1 is a line graph showing the relationship between Coarse Time (Y-axis, scaled by $\times 10^6$) and Evt_ID (X-axis). The Y-axis ranges from 0 to 70, and the X-axis ranges from 0 to 2000. The graph displays a series of steps and jumps, indicating the progression of time across different events. The data points are connected by vertical and horizontal lines, showing a non-linear relationship between event ID and coarse time.

Figure 1 is a line plot showing Coarse Time (x10⁶) versus Evt_ID. The y-axis ranges from 0 to 70 (x10⁶) and the x-axis ranges from 0 to 2000. The plot displays a series of vertical and diagonal lines representing time intervals. The lines show a step-like increase in time as Evt_ID increases, with a significant jump around Evt_ID 1000.

The graph shows the relationship between Coarse Time and Evt_ID. The Y-axis is labeled 'Coarse Time' and has a multiplier of $\times 10^6$ at the top. The X-axis is labeled 'Evt_ID' and ranges from 0 to 2000. The data is represented by a black line that starts at approximately (0, 27), rises to (200, 41), stays flat until (400, 41), then jumps to (500, 56). It stays at 56 until Evt_ID 600, then drops to (700, 4) and stays flat until (800, 4). From (800, 4), it rises to (1000, 67), then drops to (1100, 0) and stays flat until (1200, 0). From (1200, 0), it rises to (1400, 16), then to (1600, 32), then to (1800, 60), and finally to (2000, 66).
